Intelligence at Your Command

One question. Every system.

Labek is the AI that knows your company and your projects. Ask in plain words, in English or Arabic, and get the answer, the figures and the source behind every one.

What Labek Does

Real capabilities, shown on illustrative project data.

Ask and see

The direct answer first, then the key figures, each with its source and age

Explain any number

Every figure opens its evidence, the rule applied and the records as received

Morning brief

Written at 07:00: what changed overnight, today's risks and what needs you

Boards

Describe a board and Labek builds it; refine it by asking and present it full screen

Payments and notices

Claims set against site records and subcontract terms; notice windows tracked

Programme

Late activities, critical path and forecast handover read from the P6 file

Actions and approvals

Labek drafts reports, notices and replies; a person approves each one

Arabic, end to end

The interface mirrors right to left, and Labek answers in the language you ask in

Built for Both Sides of the Project

The same platform serves the contractor delivering the works and the owner paying for them.

Main Contractors

- Applications against certificates, paid and unpaid
- Subcontractor claims set against site records
- Notice deadlines found in letters and minutes
- Amounts two documents state differently, surfaced before they cost

Owners and Developers

- Programme slip against the baseline, with the revision behind it
- Inspections and RFIs awaiting a reply, and who owes it
- Decisions waiting on you, dated and sourced
- A warning when the latest programme update is out of date

How Labek Handles Your Data

Every answer shows its source

Each figure cites its document, page and line.

Labek never changes your records

The document store is connected read-only.

Numbers checked before they show

Key facts are re-read at their source; anything missing is listed as not found.

Your data can stay inside your network

Fully on premise, the AI model runs on your servers. Your data is never used to train AI models.

Every result keeps its trace

Questions, answers and boards keep their history and the steps that built them.

Access by role

People see only what they are allowed to see, set per user.

Runs Where Your Data Lives

Fully on premise

Labek, your documents and the AI model on servers in your building. Your data stays inside your network.

GPU server included in the quote

On premise, cloud AI

Labek and your documents on your servers. Only what each answer needs goes to the AI model.

Hardware included in the quote

Private cloud

A dedicated environment for your company alone, hosted in the UAE or the region you require.

No hardware to manage

From First Call to First Answer

1

Workshop

Your documents, your people and the questions you need answered.

2

Connect

Read-only access to your document store, then your live systems.

3

Set up

Users, roles, the morning brief and standard boards, agreed with your team.

4

Grow

More sources, more projects and site data, at your pace.
